The bootstrapicons package

Manual for version 1.1

<https://www.ctan.org/pkg/bootstrapicons>

<https://github.com/BenSt099/bootstrapicons>

Abstract

This is the official documentation of the package **bootstrapicons**. It contains over 2,000 icons from Bootstrap that can be used for all kind of projects.

ATTENTION! This is NOT an official package from the frontend framework **Bootstrap** (<https://getbootstrap.com/>).

1 Installation

The package is included in TeXLive and MikTeX. You can also install it via the package manager that is included in your distribution. If you would like to install it manually, please download the package from GitHub (<https://github.com/BenSt099/bootstrapicons/releases>). After that, please unzip the package and put it into the directory, where your distribution puts its packages, e.g. for TeXLive 2024 (Windows) you would put the package into this folder:

```
C:\texlive\2024\texmf-dist\tex\latex\
```

After this step, there should be a folder with path:

```
C:\texlive\2024\texmf-dist\tex\latex\bootstrapicons\
```

in which the two files

```
bootstrapicons.sty  
bootstrapicons-complete.pdf
```

and several folders should reside. After that, you have to update the name database. Depending on your distribution, this could be achieved with e.g.: `mktexlsr`. You can verify your installation by trying it out.

2 Loading the package & Dependencies

You can load the package with the following command in the preamble:

```
\usepackage{bootstrapicons}
```

This package has the following dependencies: `tikz`

3 Usage

This section deals with the construction of icons. Every icon has a name and a number that you can find in the tables below. The icon **0-circle** e.g. has the name **0-circle** and the number **1**. The number refers to the page number within the document `bootstrapicons-complete.pdf`. You can use the following commands to include the icon in your pdf:

```
\bicon[<Optional>]{<Name>}          % general purpose  
\textbicon{<Name>}                  % specially designed to fit between words
```

The commands use `includegraphics` internally. Therefore, if you wish to change angle, scale or other parameters, use `<Optional>` with `\bicon`. Below is an example:

```
%%% Example file  
\documentclass{article}  
  
\usepackage{bootstrapicons}  
  
\begin{document}  
  
    \bicon{alphabet}  
  
    \bicon[scale=1.2, angle=90]{123}  
  
    Hello World\textbicon{globe}!  
  
\end{document}
```

Output:

```
abc  
123  
Hello World  !
```

NOTE: For more information about the icons and a better overview with a search function, take a look at <https://icons.getbootstrap.com/>.

4 Icons

- Bootstrap Icons version v1.13.1 (2078 icons)
- The PDF file is called `bootstrapicons-complete.pdf`
